

PREMIUM PREFERRED

Custom
Software

For industrial and manufacturing applications

About Us

Premium Preferred is a small software development studio located in Wallaceburg, Ontario. We create custom software and database solutions for **industrial and manufacturing applications**.

We focus on providing software built using the **right tools for the job**. We design our software the way it should be designed and provide only the features you require. This gives our software **several advantages** you can't get with pre-canned software or software designed with the wrong tools.

- ∞ Reduced cost
- ∞ Easier to use
- ∞ Less prone to bugs
- ∞ Attractive design

We have **years of experience** and can quickly determine exactly which tool is right for your application. With our experience and code-base our software is developed to run smoothly and error-free. We double check our work and verify your project specifications to ensure there are **no surprises** along the way.

Quality Software

We design our software with a few **key qualities** that ensure its ability to **function better, for longer**.

Expandable – We program with future growth and unimagined needs in mind. This ensures that future upgrades cost less and work perfectly.

Robust – We thoroughly test every line of our software and perform both black-box and white-box testing on all crucial aspects and functions we create. This ensures your software will run bug free for as long as possible.

Easy To Use – Nothing is worse than software that does exactly what it is meant to do but is nearly impossible to use. We use proven software development techniques to design from the User Interface down. This ensures ease of use and a shallow learning curve,

Fully Documented – You'll never have to figure it out on your own or call us for hints. We provide end-user documentation including manuals and FAQ's. (Frequently Asked Questions)

Support

We fully believe that a properly designed software system doesn't need support. However, in the real world, things are sometimes different. We realize this and have a **24/7 support system** in place.

No matter what it is you need, we can help. We're available for technical support **over the phone** at any time or **through email** for non-immediate questions and **on-site** if necessary.

For support please contact us either by phone **519.480.0433** or through email at **support@premiumpreferred.com**

Upgrades

We design our software to be upgradable and most clients decide at some point that an upgrade is necessary. This can range all the way from a simple **user interface change** or documentation alteration to **adding functionality** or refitting software for a different application.

By nature, our expandable approach to software development allows us to upgrade most systems in **less time** and at a **reduced cost** without losing the ease of use or robust quality of our software.

What's it mean?

It means a few things. Firstly, **sometimes less is more**. Why pay for features you aren't going to use or that actually make it more difficult to learn and use the software.

∞ Pay less to get exactly what you need

Secondly, a lot of software is created to do what it was created to do and nothing more. Our software is designed with expandability in mind.

∞ Pay less to upgrade it in the future

Finally, it means you don't have to worry about your software developing an intermittent bug, your users having a difficult time figuring out how to use it or having to design other systems around it.

∞ Pay less to maintain it

What it all means is that you're getting a high quality product that will do what you want it to do and can expand to do what you'll want it to do in the future.

What do we offer?

We are capable of handling projects of any size and that are required to do just about anything. We are experts at finding **efficient solutions** to complex problems and pride ourselves in our ability to deliver well designed software that is easy to use.

While we can, and do, handle almost **any type and size of project**, we tend to focus on a few specific areas

∞ C++ and Java Applications

∞ Database Solutions

∞ Web Applications

If you can imagine it, we can do it! We specialize in coming up with efficient solutions to unique and complex problems. We have experience working with **software of every type** and under some of the most extreme circumstances. We can quickly pick up where another programmer left off and either replace existing systems or extend current functionality.

C++ & JAVA APPS

Desktop software is slowly becoming a thing of the past. However, its long **history of dependability** and robustness allows it to remain one of the **best options for custom software** written for industrial and manufacturing applications.

What can you do with a C++ or Java application? You can do almost anything. Almost every single thing you run on your PC was created this way, all the way from Internet Explorer and Microsoft Office to Windows Vista. **The sky is the limit** and anything you can imagine can be created using these fundamental building blocks.

- ∞ Part testing
- ∞ Real-time data analysis
- ∞ Complex algorithmic calculations
- ∞ Tester software
- ∞ Simulations
- ∞ Almost anything imaginable

Database Solutions

Our SQL database architectures are designed with proper data structuring to ensure **data integrity**. We create properly normalized, properly structured databases to ensure **expandability** and use Stored Procedures and best programming practices to ensure your data has the best **security measures**.

We can **port your current database system** to a more robust SQL Server architecture or expand on your current setup if needed.

Viewing and sorting your data can be cumbersome and difficult requiring SQL gurus and IT staff to produce data spreads and reports. With most of our database solutions we can create customized **webpage front ends** with report makers and data filtering. This allows you to filter and view data in whatever way you need to.

∞ Secure Storage

∞ Expandable architectures

∞ Webpage interfacing

∞ Maintenance-free systems

Web Applications

Our custom designed web applications can be created to do almost anything. Utilizing either intranet or the internet, our web applications allow a world of possibilities that traditional desktop software doesn't. With our experience working with **almost every web technology** available we know we can bring your vision to reality.

- ∞ Interactive scheduling software
- ∞ Inter-office messaging system
- ∞ Client login systems
- ∞ Mobile device applications
- ∞ Database interfacing

Contact Us

We'd be happy to give you a free quote for your project. You can reach us by email or by phone Monday through Friday 9am – 5 pm.
